tion to the men shaking rattles, one or more Indians are beating drums and chanting. These noisy ceremonies are continued with short intervals during the whole night. When one party of Indians are tired and stop to rest for a moment, they are relieved by another party, since it is considered very important that there should be no interruption in the ceremonies; otherwise they would lose something of their effect. In the early morning the danger is believed to have passed; the fermentation has taken place, and the evil spirits have not been able to approach the drink and spoil it.

Although this negative object of the rites is particularly emphasized by the Indians, they also have a positive object which is indicated by the very expression »hurry on the fermentation». As we have already seen, the fruit of which the drink is made is believed to be animated by a spirit, and it is the same spirit that is active in the fermented, intoxicating beer. The rites described, while they are supposed to keep off evil spirits, are also intended to influence magically the plant-spirit itself and to bring it to its highest point of development, which is marked by the fermentation. This is partly effected through the chanting, the shaking of rattles, and the drumming, partly through the procedure of mixing the mashed fruit with saliva. The saliva really has the property of bringing about fermentation, and this phenomenon is explained by the superstitious Indian as due to the supernatural virtues which this secretion is believed to possess. Even the fact that only *old* women chew the fruit is probably not accidental. Old people have by nature a stronger magical power than the young and their saliva has therefore greater efficacy.

The Chaco Indians not only try to promote the growth of the fruits by shaking rattles and drumming, but also by *dancing*. Thus the Toba dance *Nahót dónnaran* is not only performed in cases of sickness, but also with a view to »hurrying on» the chanar fruit (*niapilák tákkai*). Once I witnessed such a ceremony. The chañar fruit — next to the algaroba the most important of the fruits growing in the Chaco forests — reaches maturity in the month of October and forms the staple food of the Indians during that month. The dance was performed in the following way. The fruit gathered in during the day was spread out on cloths or big hides on the ground outside the houses, where they are generally laid to dry. The dance took place at night. A young man began to dance alone, stamping alternately with his feet on the ground, without using any rattle, and chanting at first in a low voice. Gradually his movements
